Dev. 43:87-100(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EMERTION: IMPLICATED IN CELL FATE SPECIFICATIONS DURING EMERGY DEVELOPMENT. MAY BE INVOLVED IN THE FORMATION OF THE NEURAL PLATE, NOTOCHORD AND BRAIN VESICLES.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

DEVELOPMENTAL STAGE: EXPRESSED IN ALL CELLS IN PREGASTRULATION STAGES. DURING GASTRULATION IS DIFFERENTIALLY EXPRESSED,

ACCUMULATING PREDOMINANTLY IN THE PRECHORDAL MESODERM AND NOTOCHORD. AT THE END OF GASTRULATION, EXPRESSED ALONG THE ANYELOPING ASIA INCLUDING THE DEVELOPING HERAL PLATE ANYERIOR POSTERIOR AXIS INCLUDING THE DEVELOPING HERAL PLATE AND DIFFERENTIATING MESODERM. ALSO PRESENT IN THE DEVELOPING AND DIFFERENTIATING MESODERM.
                                                                                                                                                                                                                                                                                                                                                                                                 AND DIFFERENTIATING MESODERM. ALSO PRESEN ERAIN AND HEAD RECTONS. SIMILARITY: HIGH, WITH OTHER NOTCH-TYPE FAIMLARITY: CONTAINS 36 EGF-LIKE DOMAINS. SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS. SIMILARITY: CONTAINS 6 ANK REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PROTEINS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
DEVELOPMENTAL STAGE: EXPRESSED ALMOST UNIFORMLY IN EARLY EMBRYOS.
SIMILARITY: HIGH, WITH OTHER NOTCH-TYPE PROTEINS.
SIMILARITY: CONTAINS 36 EGF-LIKE DOWAINS.
SIMILARITY: CONTAINS 3 LIN/NOTCH REPEATS.
SIMILARITY: CONTAINS 6 ANK REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S; PR00010; EGFBLOOD.
